The HPD Standard is solely a declaration of product content and direct health hazards associated with exposure to its individual contents. It is not a full assessment of environmental impacts from the life cycle of this product. It is not an assessment of risks associated with actual use of the product. It does not address the potential health impacts of substances used or created during manufacture that do not appear in the final product as residuals, nor substances created during combustion or other degradation processes.

This Health Product Declaration was generated following the requirements of the noted Standard version and is valid for a total of three years after date of issue or three months after a substantive change of product contents occurs. Users should verify that this Health Product Declaration is compliant with the most current version of the HPD Standard. CANCER	IARC: Group 1: Agent is carcinogenic to humans - inhaled from occupational sources (also in NIOSH-C, MAK, NTP-RoC, Prop 65)					
Quartz is a naturally occurring component of sand, as well as a component of cement. It is unavoidable in concrete products. Hazards are applicable to individuals exposed to high quantities of quartz in dust particle form, which may occur throughout manufacturing or to a mason cutting the concrete block. Quartz is not hazardous in its end state embedded within the final concrete product.

NOTES

This HPD declares a BM1 category health hazard from quartz, which naturally exists in concrete aggregates and is present in all concrete products. All hazards stated are risks associated with basic materials; these hazards are not applicable to end users of the final product (possible exception: mason exposed to dust particles by cutting concrete). This product has no VOC emissions.
